

Thank you for using CreatorSet!

Instructions:

1. Unzip order
2. Drag & drop animation into editing software
3. Enjoy!

How to get rid of the green/red background?

Using your editing software, you need to “Chroma Key” the background, which will get rid of the background color. *Please note: if you're using Premiere Pro, VEGAS, Final Cut Pro or iMovie we recommend using the .mov file, otherwise use the .mp4 file.*

How to use the .mov file?

Windows:

Windows users must download QuickTime to preview (.mov) files.

Free download: <https://support.apple.com/kb/DL762> 

Mac:

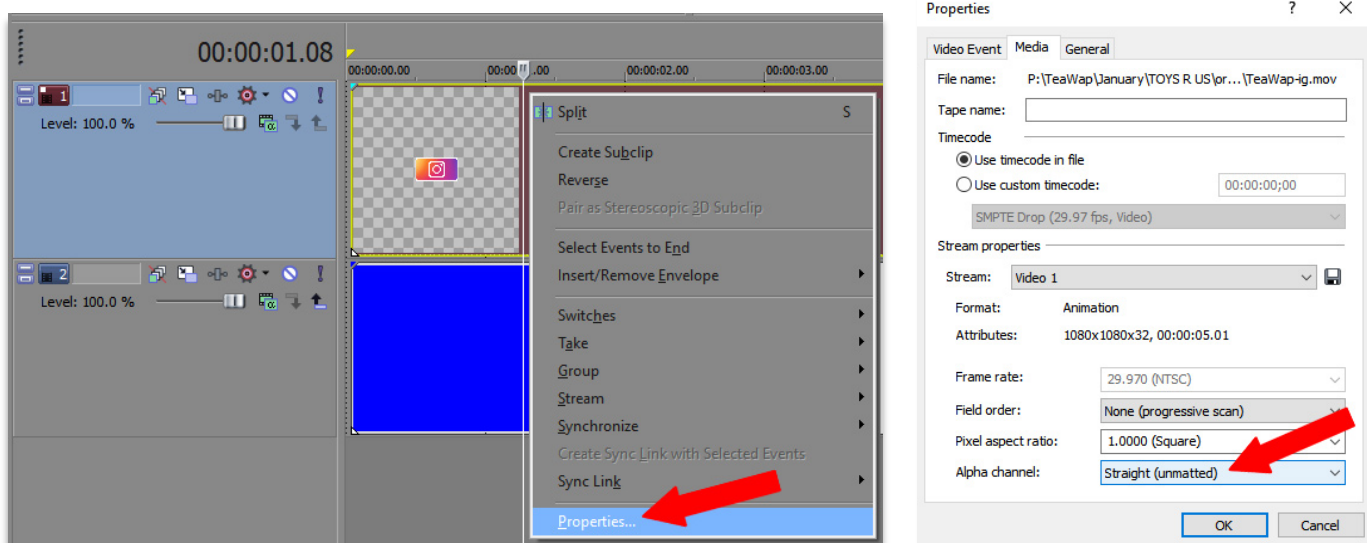

Certain versions of MacOS cannot preview (.mov) files.

Drag & drop your animation into your editing software to preview.

Vegas:

Some versions of VEGAS require you to enable “alpha channel” to get a transparent background.

1. Right click onto animation layer
2. Select ‘properties’
3. In ‘Media’ tab, set alpha channel to ‘Straight’.
